

✓ Test Cases examples:

1. Verify seat map loads correctly on Safari browser (iOS)

Test Case ID: TC-001

Module: Seat Selection

Priority: High

Test Type: Functional

Test Design: Manual

Preconditions:

- Device running iOS 16.4 or higher.
- Safari browser is installed on the device.
- Flight search page loaded and seats are available for selection.

Test Steps:

1. Open Safari on an iPhone (iOS 16.4 or higher).
2. Navigate to the airline booking website.
3. Search for a flight (One-way, Round-trip, or Multi-city).
4. Proceed to the seat selection page.
5. Observe the seat map for loading.

Expected Result:

Seat map should load without issues, and seats should be available for selection.

Actual Result:

(Describe the actual outcome, i.e., whether the seat map failed to load or displayed an error.)

Pass/Fail Criteria:

- Pass: Seat map loads correctly.
- Fail: Seat map fails to load or shows an empty screen.

Attachments:

(Provide screenshots of the issue or logs if available.)

2. Verify Booking Confirmation Email Includes Complete Flight Details

Test Case ID: TC-002

Module: Ticket Confirmation

Priority: Medium

Test Type: Functional

Test Design: Manual

Preconditions:

- User has successfully completed the flight booking process.
- Email address provided during booking is valid.
- Flight booking confirmation email is expected.

Test Steps:

1. Complete the booking for any flight on the airline's website or mobile

app.

2. Check the email inbox associated with the booking.
3. Open the confirmation email received from the airline.
4. Verify that the email contains all necessary details, including flight number, departure and arrival times, and passenger details.

Expected Result:

The confirmation email should include the following details:

- Flight number
- Departure and arrival time
- Passenger information
- Booking reference number

Actual Result:

(Describe the actual outcome, i.e., missing flight details in the email.)

Pass/Fail Criteria:

- Pass: Email contains all necessary flight details.
- Fail: Email lacks flight details (flight number, times, etc.).

Attachments:

(Provide a screenshot of the email received or the booking reference.)

3. Verify PayPal Payment Option is Displayed for DE (German) Locale

Test Case ID: TC-003

Module: Payment Gateway

Priority: Medium

Test Type: Functional

Test Design: Manual

Preconditions:

- The website must support the DE locale (German language setting).
- Flight options are available for booking.

Test Steps:

1. Open the website and set the language to German (DE locale).
2. Search for flights and proceed to the payment page.
3. On the payment page, check for available payment methods.
4. Verify if PayPal is listed as an option for payment.

Expected Result:

PayPal should be visible as a payment option along with other methods like credit cards.

Actual Result:

(Describe the actual outcome, i.e., if PayPal was missing or not shown as an option.)

Pass/Fail Criteria:

- Pass: PayPal is listed as a payment option.
- Fail: PayPal is not visible or available for selection.

Attachments:

(Provide screenshots of the payment page, comparing the DE locale vs. other locales if applicable.)
